A STUDY ON A VAPORIZING COMBUSTOR FOR GAS TURBINES
Shoichi Sato Washington NASA Oct 1970 64 p refs Transl into ENGLISH from Ishikawajima Harima Rev (Japan) v 9 Sep 1969 p 473 494
(Contract NASw-2035)
(NASA TT-F-13272) Avail NTIS CSCL 21E

A new type of film vaporizing combustor for gas turbines is proposed, which should mark an advance over the conventional combustor. The theoretical and experimental study undertaken in this connection covers such aspects as vaporizing characteristics of liquid fuel film, flame spreading and stability, performance tests on actual combustors, and practical design considerations. A combustion experiment using a square section simplified model of a jet engine combustor is described. The results attest to the superiority of the combustor over conventional types in such aspects as combustion efficiency and intensity. Proposed applications and design procedures are discussed, as well as the prospects of realizing practical combustors for actual use. Author
